MY VISION AS A PROFESSOR OF PRACTICE

My approach as a Professor of Practice is simple: to deliver training that is practical and makes a real-world impact. I plan to update course content to include key future skills like Data Science and Python Programming, ensuring our education directly matches what the industry is looking for. My focus is on being a dedicated mentor, not just a lecturer. By giving students a solid mix of essential theory and in-demand practical skills, I will help them secure excellent careers, which directly supports VIT's mission for student success.
